

Requirements Development Project

[350 points]

Description:

In this requirements development team project, each team will act as both a customer and a requirements developer:

- **(As a customer)** Select and describe a specific software-intensive **information system/product/application** to be built.
- **(As a developer)** Collect, prototype, model, specify and validate the **requirements** for the customer-requested software-intensive information system/product/application by applying Requirements Engineering.

Deliverables:

- A high-level description of the software-intensive information system/product/application
- The **Software Requirements Specification (SRS)**

Presentation & Discussion:

- 5/21/20: A customer description of the system/product/application
- 5/27/20 (Progress – 1st iteration): The software requirements specification (SRS)
- 6/3/20 (Final): The final software requirements specification (SRS)
